

# Divvun info for administrators and integrators

## Table of contents

1 Windows.....	2
2 MacOS X.....	2

## **1 Windows**

The Divvun 2.2 installer is made using NSIS, and is by default enabled for silent installations, and thus easy mass-deployment. You should run the installer using option /S to run it in silent mode:

```
MSSOfficeDivvunTools.exe /S
```

Further info can be found in the [NSIS documentation](#), and the source code for building the installer can be found [here](#). If you have patches for bug fixes or feature enhancement, either [send it via e-mail](#) or attach it to a [Bugzilla bug](#).

## **2 MacOS X**

The Mac installer is made using Apple's own installer tools, and should be easily integratable in a larger deployment scheme. See Apple's own documentation for further details.
